**SOSE Group Research Task**

In your group you are to research one of the following topics about renewable resources:

- Solar Energy
- Wind Energy
- Geothermal Energy
- Hydro Power

1. You will be put into a group and selected into one of the above topics. You will be given a planning sheet to work through.
2. You will need to develop four questions in your group and decide on one question to research each.
3. Your questions need to be open ended questions beginning with ‘how’ or ‘why’.
4. You will be given a pathfinder (http://librarypathfinders.weebly.com/) which will provide you with some of the resources that you will need.
5. You are to use a variety of sources to gather your information. Make sure you acknowledge all of your sources in a Bibliography. Make sure this is done individually underneath your own information for assessment purposes.
6. To present your findings you will produce an information booklet. You will need to include a title page and one page from each person, including your bibliography.
7. Your group will then be asked to create a diorama to explain how your energy works, including labels.
8. Your groups will present your information and diorama to the class in the form of an oral presentation.

**Members in my group:**

_________________________________________

_________________________________________

**Our topic is:**

Name each member of your group and what they are researching.
